General Notes:

CSC Software is not optimised for use with Dual Core processors

Non of the above products, unless otherwise stated, are tested on WinXP Home or WINXP Pro x64. As such CSC cannot guarantee the software's performance/operability on these platforms.

Foot Notes:

¹ Although the minimum system requirement will allow the software to operate the recommended specification is necessary to ensure effective day to day use.

² Recommended systems will cope adequately with most models however the program requirements are model dependant and as such large models may require further resources.

³ A fully Service Packed Word version is required.

⁴ Requires a graphics card with a minimum of 128MB of dedicated RAM

⁵ For more details or view information regarding 64bit versions please visit the Autodesk website <http://url.cscworld.com/RevitSystemRequirements>

⁶ Models may exceed the memory utilization limit of a 32-bit operating system. For such models S-FRAME 9 includes a 64-bit Analysis Engine which requires a 64-bit Processor and Operating System and sufficient RAM to utilize these effectively.

⁷ Compatible with Windows 7 but not fully tested due the final version of Windows 7 not being available at time of release
